World Anesthesia Day 2026 16th October 2026 (BACTA)

World Anesthesia Day 2026 highlights the essential role of anesthesiologists under the theme ***"Anaesthesiology Along the Patient Pathway: Before, During and Beyond Surgery."*** In Bangladesh, this occasion offers a crucial platform for the Bangladesh Association of Cardiovascular and Thoracic Anesthesiologists **(BACTA)** to showcase the rapid advancement of cardiac surgery and cardiac anesthesia across the country. Over the past few decades, cardiovascular surgical care in Bangladesh has evolved dramatically from fundamental open-heart procedures to complex interventions—such as pediatric congenital cardiac surgeries, off-pump coronary artery bypass grafting (OPCAB), minimally invasive valve replacement /repair, aortic surgery, endoscopic and robotic surgery. Standing at the core of these life-saving surgeries, specialized cardiac anesthesiologists ensure perioperative stability through advanced transesophageal echocardiography (TEE), precise hemodynamic monitoring, and targeted post-operative critical care and blood coagulation management. Through continuous medical education, hands-on training, and clinical research, BACTA continues to elevate national standards of patient safety, playing an indispensable role in transforming cardiac surgery in Bangladesh into a safe, reliable, and world-class domain.
